
Handling Instructions

Washing

- Colored embroidery should always be washed separately.
- A large washing tub should be used so that the embroidered article can circulate freely and is not pressed together.
- Dry embroidered garments quickly, but never wring out. Prolonged contact, pressure, or friction with other garments under wet conditions is to be avoided.
- Isacord embroidered garments can be washed with bleaching agents and stain removers. Do not spot treat, always wash the entire garment.
- Safe for industrial laundering and dry cleaning.

Storage

- Avoid direct sunlight and keep in a cool place.
(68 F, 60% atm. humidity)

Ironing

- Dampen slightly before ironing then iron from the back side. Always use the lowest heat setting over embroidery.
- Avoid continuous contact to irons, heat press systems, etc.
- Use caution when using heat-press systems! Varying factors such as temperature, pressure, vapor and duration of contact may cause unpredictable results. A test of materials is highly recommended.

Additional Tips

- Isacord is a high sheen polyester embroidery thread which offers maximum washability and durability and is, with correct handling, safe for Hypochlorite bleaching processes. Note: this does not include a local spotting treatment! The high resistance to abrasion under normal and even wet conditions is a clear advantage for its use on frequently or harshly washed garments (i.e athletic sportswear and shoes, leather, work uniforms and stone washed garments).
