
Handling Instructions

Washing

- Colored embroidery should always be washed separately.
- A large washing tub should be used so that the embroidered article can circulate freely and is not pressed together.
- Dry embroidered garments quickly, but never wring out. Prolonged contact, pressure, or friction with other garments under wet conditions is to be avoided.
- Only light duty washing powder is to be used. Bleaching agents, heavy duty detergents or stain removers may cause slight color changes.
- Garments embroidered with Yenmet are not recommended for industrial laundering.
- Yenmet embroidered garments may be dry- cleaned.

Storage

- Avoid direct sunlight and keep in a cool place.
(68 F, 60% atm. humidity)

Ironing

- Dampen slightly before ironing then iron from the back side. Always use the lowest heat setting over embroidery.
- Avoid continuous contact to irons, heat press systems, etc.
- Use caution when using heat-press systems! Varying factors such as temperature, pressure, vapor and duration of contact may cause unpredictable results. A test of materials is highly recommended.

Additional Tips

- Contact with acids, sulfur, active chlorine, saltwater or heavy perspiration in combination with a long exposure in direct sunlight should be avoided.
